### Dataset Title

Monthly lake water quality data (May-September 2022) following the Greenwood Fire in northeastern Minnesota

### Abstract

This repository contains lake water quality responses to the 2021 Greenwood Fire in Superior National Forest, Minnesota, USA (near Isabella, MN in northeastern MN). Thirty lakes (15 burned watershed, 15 control) were sampled monthly from May-September 2022 along various fire disturbance gradients (e.g., % watershed burned) and in relation to hydrologic connectivity (i.e., drainage vs. isolated lakes). Much of the non-water quality data we used came from published sources, which are described and referenced below. This repository also contains R code used to analyze and visualize data, as well as some output figures.

## Methods

The methods used to analyze and/or generate the data tables below can be found in the R scripts in this repository and/or associated manuscripts (see Notes and Comments).

## Data Table

**Table name:** Data/BurnSeverity/Ian\_calculations/all\_burn\_severity\_variables.csv

**Table description:** Burn severity (vegetation and soil) metrics calculated at watershed and shoreline (100 m lake buffer) scales. This table is a combination of other tables in the same folder (burned\_buff100m\_sbs\_pct, burned\_buff100m\_vbs\_pct, burned\_ws\_sbs\_pct, burned\_buff100m\_vbs\_pct).

Column name	Description	Unit or code explanation or date format	Empty value code
lagoslakeid	Unique lake ID in LAGOS database	NA	
ws_vbs_Unburned_pct	Percentage of watershed that is unburned	NA	
ws_vbs_Low_pct	Percentage of watershed burned at low severity based on vegetation	NA	
ws_vbs_ModerateLow_pct	Percentage of watershed burned at moderate-low severity based on vegetation	NA	
ws_vbs_ModerateHigh_pct	Percentage of watershed burned at moderate-high severity based on vegetation	NA	
ws_vbs_High_pct	Percentage of watershed burned at high severity based on vegetation	NA	
ws_vbs_total_burn_pct	Percentage of watershed burned	NA	
net_id	Network unique identifier	NA	

Note: additional columns are similar to above. 'vbs' and 'sbs' indicate burn severity based on vegetation and soil, respectively and ws and buff100m indicate watershed and shoreline scales.

**Table name:** Data/LAGOS/LAGOS\_LOCUS\_GEO\_DEPTH\_combined.csv

**Table description:** Ancillary lake and watershed data from LAGOS-US (lagoslakes.org). The LOCUS\_GEO\_DEPTH table includes columns also in the standalone GEO and LOCUS tables. Note that 'zone' refers to lake watershed in descriptions.

Column name	Description	Unit or code explanation or date format	Empty value code
lagoslakeid	Unique lake ID in LAGOS database	NA	
Site	Lake name	NA	
climate8110norm_ppt_m mperyr	Average annual precipitation from 1981- 2010	Mm	
lakes1ha_all_ha	total water area of lakes greater than or equal to 1 ha within the zone; because lake polygons are clipped to the zone boundary, the summed lake area does not include lake area located outside of the zone	Hectares	
lakes1ha_all_n	count of all lakes greater than or equal to 1 ha within the zone		
lakes1ha_all_nperha	density of lakes greater than or equal to 1 ha within the zone expressed as number per hectare		
lakes1ha_all_pct	percent of the zone area comprised of lakes greater than or equal to 1 ha; because lake polygons are clipped to the zone boundary, the summed lake area does not include lake area located outside of the zone		
streams_all_mperha	density of all streams within the zone, calculated as the sum of the stream length divided by the zone area; the artificial lines through non-riverine waterbodies are not counted in the stream length		
roads_mperha	road density within the zone, calculated as sum of the length of roads in the zone divided by the area of the zone		
area_ha	watershed area	Hectares	
perimeter_m	perimeter of watershed polygon including the perimeter of any internal holes	m	
soil_clay_pct	average percentage mass fraction of clay, 0 to 2 micrometers, in the 0 to 5 cm depth soil layer within the zone		

soil_coarse_pct	average percentage by volume of coarse fragments in the 0 to 5 cm soil depth layer within the zone		
soil_depthtobedrock_cm	average absolute depth to bedrock within the zone	cm	
soil_kffact	average soil erodibility factor, not adjusted for the effect of rock fragments, within the zone	NA	
soil_orgcarbon_gperkg	average organic carbon content, fine earth fraction, in the 0 to 5 cm soil layer within the zone	g/kg	
soil_sand_pct	average percentage mass fraction of sand, 50 to 200 micrometers, in the 0 to 5 cm depth soil layer within the zone		
soil_silt_pct	average percentage mass fraction of silt, 2 to 50 micrometers, in the 0 to 5 cm depth soil layer within the zone		
elevation_max_m	maximum elevation in the zone referenced to the North American Vertical Datum of 1988, NAVD88	m	
elevation_mean_m	mean elevation in the zone referenced to the North American Vertical Datum of 1988, NAVD88	m	
elevation_min_m	minimum elevation in the zone referenced to the North American Vertical Datum of 1988, NAVD88	m	
elevation_sd_m	Standard deviation of elevation in the zone referenced to the North American Vertical Datum of 1988, NAVD88	m	
reliefratio	an index of topographic relief within a watershed calculated as the difference between mean and minimum elevation divided by the difference between maximum and minimum elevation	NA	
topographicwetness	mean topographic wetness index of cells within the zone	NA	
tri_m	mean terrain ruggedness index, TRI, of cells within the zone using the Riley algorithm (1999), where TRI at each cell is the absolute difference in meters between the elevation of the focal cell and its immediate neighbors; the cell size is 10 m square.	NA	
nlcd_fordec41_pct	percent of zone classified as deciduous forest		
nlcd_forcon42_pct	percent of zone classified as evergreen forest		
nlcd_formix43_pct	percent of zone classified as mixed forest		
nlcd_wetwood90_pct	percent of zone classified as woody wetlands		

nlcd_wetemerg95_pct	percent of zone classified as emergent herbaceous wetlands		
lake_waterarea_ha	surface area of lake waterbody polygon from NHD comprised of open water; islands are excluded	Hectares	
lake_totalarea_ha	total area of the lake waterbody polygon from the NHD; includes combined area of open water and any islands within the outer boundary	Hectares	
lake_islandarea_ha	surface area of any islands contained within the outer boundary of the lake waterbody polygon from NHD	Hectares	
lake_perimeter_m	perimeter of outer boundary of lake waterbody polygon from the NHD; excludes perimeter of any islands	m	
lake_islandperimeter_m	perimeter of islands contained within the outer boundary of the lake waterbody polygon from the NHD	m	
lake_shorelinedevfactor	shoreline development factor; calculated as lake_perimeter_m divided by the product of 2 times the square root of pi times lake_waterarea_ha	NA	
lake_connectivity_class	maximum hydrologic connectivity class of the focal lake determined from the NHD network considering both permanent and intermittent-ephemeral flow	NA	
lake_connectivity_fluctuates	indicates whether the lake connectivity classification depends on non-permanent flow	Y=yes, N=no	
lake_connectivity_permanent	hydrologic connectivity class of the focal lake determined from the NHD network considering only permanent flow	NA	
lake_lakes1ha_upstream_ha	total area of lakes greater than or equal to 1 ha upstream of the focal lake, connected via surface streams	Hectares	
lake_lakes4ha_upstream_ha	total area of lakes greater than or equal to 4 ha upstream of the focal lake, connected via surface streams	Hectares	
lake_lakes10ha_upstream_ha	total area of lakes greater than or equal to 10 ha upstream of the focal lake, connected via surface streams	Hectares	
lake_lakes1ha_upstream_n	count of lakes greater than or equal to 1 ha upstream of the focal lake, connected via surface streams		
lake_lakes4ha_upstream_n	count of lakes greater than or equal to 4 ha upstream of the focal lake, connected via surface streams		

lake_lakes10ha_upstream_n	count of lakes greater than or equal to 10 ha upstream of the focal lake, connected via surface streams		
lake_elevation_m	the elevation of the lake polygon central point, in meters; referenced to the North American Vertical Datum of 1988 or NAVD88 and obtained from the National Elevation Dataset	m	
ws_subtype	watershed subtype class for the watershed; LC equals local catchment, DWS equals drainage-watershed, IDWS equals inter-drainage-lake watershed	NA	
ws_focallakewaterarea_ha	surface area of focal lake for which the WS is calculated	Hectares	
ws_area_ha	area of watershed polygon	Hectares	
ws_perimeter_m	perimeter of watershed polygon including perimeter of any internal holes	m	
ws_lake_arearatio	ratio between watershed area and lake water area	NA	
lake_meanwidth_m	Average width of lake	m	
lake_maxdepth_m	The maximum depth in meters of a lake based on existing sources, not based on field measurements	m	
type	Burned watershed or control group lake	NA	
source	Drainage (inflowing streams) or isolated lake (no inflow our outflows)	NA	

**Table name:** Data/VariancePartitioning/burned\_v\_control.csv

**Table description:** Each of the tables in this folder represents output from a variance partitioning analysis. The difference is the fire variable used. ConnClass=permanent hydrologic connectivity class, mean depth=average of maximum depths measured at each lake in the field, Random:lake=random lake effect, Month=random month effect. See LAGOS table above for descriptions of predictor variables.

burned\_v\_control.csv: based on simple burned vs. control groups

pct\_buffer\_burned.csv: based on percent shoreline (100m lake buffer) burned

pct\_buffer\_burned\_HSsoil.csv: based on percent shoreline (100m lake buffer) burned at high severity based on soil

pct\_buffer\_burned\_HSveg.csv: based on percent shoreline (100m lake buffer) burned at high severity based on vegetation

pct\_ws\_burned: based on percent watershed burned

pct\_ws\_burned\_HSsoil.csv: based on percent watershed burned at high severity based on soil

pct\_ws\_burned\_HSveg.csv: based on percent watershed burned at high severity based on vegetation

Column name	Description	Unit or code explanation or date format	Empty value code
predictor	Lake or watershed predictor variable	Variable; see LAGOS table above	
variable	Water quality response variable	Variable; see water quality tables below	
variance	Variance explained	NA	

**Table name:** Data/WaterQuality/burned\_control\_change\_summary.csv and  
burned\_control\_change\_summary\_conn.csv.

**Table description:** Monthly summaries of lake water quality in burned vs. control lakes from 2022. The table with 'conn' in the title contains columns for burned vs. control drainage and isolated lakes, whereas the other is all burned vs. control lakes. Measurements are lake surface samples.

Column name	Description	Unit or code explanation or date format	Empty value code
Month	Sampling month	NA	
TP_burned	Total phosphorus in burned lakes (first number is concentration, second is number of lakes sampled)	ppb	
TP_control	Total phosphorus in control lakes (first number is concentration, second is number of lakes sampled)	ppb	
TP_diff	Total phosphorus difference in burned vs. control lakes (first number is concentration, second is percentage)	ppb	
TN_burned	Total nitrogen in burned lakes (first number is concentration, second is number of lakes sampled)	ppb	
TN_control	Total nitrogen in control lakes (first number is concentration, second is number of lakes sampled)	ppb	

TN_diff	Total nitrogen difference in burned vs. control lakes (first number is concentration, second is percentage)	ppb	
DOC_burned	Dissolved organic carbon in burned lakes (first number is concentration, second is number of lakes sampled)	ppm	
DOC_control	Dissolved organic carbon in control lakes (first number is concentration, second is number of lakes sampled)	ppm	
DOC_diff	Dissolved organic difference in burned vs. control lakes (first number is concentration, second is percentage)	ppm	
TSS_burned	Total suspended solids in burned lakes (first number is concentration, second is number of lakes sampled)	mg/L	
TSS_control	Total suspended solids in control lakes (first number is concentration, second is number of lakes sampled)	mg/L	
TSS_diff	Total suspended solids difference in burned vs. control lakes (first number is concentration, second is percentage)	mg/L	
Chloro_burned	Chlorophyll-a in burned lakes (first number is concentration, second is number of lakes sampled)	ppb	
Chloro_control	Chlorophyll-a in control lakes (first number is concentration, second is number of lakes sampled)	ppb	
Chloro_diff	Chlorophyll-a difference in burned vs. control lakes (first number is concentration, second is percentage)	ppb	
Secchi_burned	Secchi depth in burned lakes (first number is value, second is number of lakes sampled)	m	
Secchi_control	Secchi depth in control lakes (first number is value, second is number of lakes sampled)	m	
Secchi_diff	Secchi depth difference in burned vs. control lakes (first number is value, second is percentage)	m	
pH_burned	pH in burned lakes (first number is value, second is number of lakes sampled)		
pH_control	pH in control lakes (first number is value, second is number of lakes sampled)		
pH_diff	pH difference in burned vs. control lakes (first number is value, second is percentage)		
ANC_mgCaCO3L_burned	Acid neutralizing capacity in burned lakes (first number is concentration, second is number of lakes sampled)	mg/L as CaCO3	

ANC_mgCaCO3L_control	Acid neutralizing capacity in control lakes (first number is concentration, second is number of lakes sampled)	mg/L as CaCO3	
ANC_mgCaCO3L_diff	Acid neutralizing capacity difference in burned vs. control lakes (first number is concentration, second is percentage)	mg/L as CaCO3	
SpecCond_uScm_burned	Specific conductivity in burned lakes (first number is conductivity, second is number of lakes sampled)	uS/cm	
SpecCond_uScm_control	Specific conductivity in control lakes (first number is conductivity, second is number of lakes sampled)	uS/cm	
SpecCond_uScm_diff	Specific conductivity difference in burned vs. control lakes (first number is conductivity, second is percentage)	uS/cm	
NH4N_burned	NH4 in burned lakes (first number is concentration, second is number of lakes sampled)	ppb	
NH4N_control	NH4 in control lakes (first number is concentration, second is number of lakes sampled)	ppb	
NH4N_diff	NH4 difference in burned vs. control lakes (first number is concentration, second is percentage)	ppb	
WaterTemp_C_burned	Water temperature in burned lakes (first number is value, second is number of lakes sampled)	degC	
WaterTemp_C_control	Water temperature in control lakes (first number is value, second is number of lakes sampled)	degC	
WaterTemp_C_diff	Water temperature difference in burned vs. control lakes (first number is value, second is percentage)	degC	

**Table name:** Data/WaterQuality/combined\_lab\_field\_may\_sep.csv
